

MAXWELL BABEY

Intermediate Software Developer

babeymax@gmail.com | (438) 930-6997 | Halifax, NS | <https://www.linkedin.com/in/maxwell-babey/> | <https://github.com/mbabey>

PROFILE

Software developer with 2 years of professional experience delivering systems in **Agile** environments, with a strong foundation in **JavaScript, Go, C, SQL, Linux / POSIX** systems, and **network protocol design**. Experienced in **CI/CD** pipeline design, **Kubernetes / Docker**, and **secure system design (OAuth2, RBAC)**. Proven track record of leading development teams, producing thorough documentation, and contributing across the full SDLC from detailed design through integration testing and release.

TECHNICAL SKILLS

Languages:	C, Go, SQL, Shell Scripting (Bash), JavaScript (Express, React)
Platforms & OS:	Linux / Unix, Kubernetes, Docker
DevOps:	CI/CD (GitLab CI), Helm
Security:	OAuth2, RBAC, HashiCorp Vault, TLS/HTTPS
SDLC & Agile:	Agile/Scrum, Jira, unit & integration testing (Jest, Go testing)

WORK EXPERIENCE

Software Development Lead

Lys Intelligence Inc. | Jan 2026 – Present

- Restored continuous delivery for two legacy applications, establishing a reliable 2-week release cycle aligned with Agile sprint cadences.
- Led modernization of legacy systems, producing extensive documentation to improve long-term maintainability and scalability.
- Authored and maintained comprehensive software design, test, and release documentation, increasing cross-team visibility and reducing integration friction.
- Ensure uptime, performance, and security posture of production stacks running on Linux-based infrastructure in Kubernetes.
- Organize and lead a development team of 6 developers through structured task management, code reviews, and timely delivery of high-quality software increments.

Full-Stack Software Developer

Lys Intelligence Inc. | Mar 2024 – Jan 2026

- Designed solutions to customer-requested features and communicated detailed technical requirements across a multi-disciplinary Agile team, owning features from design through integration testing.
- Designed and implemented an automated secret management system using HashiCorp Vault and Kubernetes, centralizing source of truth for 20+ secrets and strengthening maintainability for 8 services across 6 deployment environments.
- Engineered a production-grade authentication and authorization system for UI and API service layers following OAuth2 specification, successfully mitigating unauthorized access by external threat actors.
- Designed and implemented a role-based access control (RBAC) protocol integrated with Microsoft Azure, empowering application administrators to enforce fine-grained permissions for 100+ users.
- Built and maintained CI/CD pipelines with GitLab CI for deploying applications to VM and Kubernetes environments, improving release safety by reducing manual integration risk.
- Wrote extensive and thorough unit tests for front-end, back-end, and cronjob services using Jest, preventing regressions and ensuring consistent business logic through code changes.
- Integrated linting and testing tasks into CI/CD pipelines to reduce bugs and enforce style guidelines, improving code quality and maintainability for a team of 20 developers.
- Designed relational schemas and wrote SQL Server queries to support user management and business logic across 5 services.
- Led transition from HTTP-based microservice interfaces to queue-based interfaces using RabbitMQ, improving application stability, performance, and scalability.
- Created and documented development processes adopted across multiple teams, reducing defect rates, cutting redundant work, and increasing developer throughput.

PROJECTS

kamagi.club

June 2024 – Present | <https://kamagi.club/>

- A booking platform for an award-winning tattoo artist, continuously maintained and supported since June 2024.
- Backend built in Go, containerized with Docker, and deployed on Google Cloud Run.
- Frontend built using React and deployed on Firebase Hosting.
- Integrated with Gmail API, Mailchimp API, and Google reCAPTCHA v2/v3.

EDUCATION

Computer Systems Technology Diploma

British Columbia Institute of Technology | Sept 2021 – May 2023 | GPA: 3.72 / 4.0 (93% avg)

- Studied data structures, algorithms, design patterns, object-oriented programming, discrete mathematics, and network protocol design.
- Designed and built application-layer network protocols and complex POSIX-based networking applications in C.
- Applied Agile project management methodologies and software development lifecycle (SDLC) principles throughout coursework and capstone projects.

ADDITIONAL SKILLS

- French (Intermediate)
