

MAXWELL BABEY

Software Development Lead

babeymax@gmail.com | (438) 930-6997 | Halifax, NS | <https://www.linkedin.com/in/maxwell-babey/> | <https://github.com/mbabey>

TECHNICAL SKILLS

Languages:	JavaScript (Express, React, Node), Go, SQL, C, Shell Scripting (Bash)
Databases:	MongoDB, SQL Server, Oracle, Databricks
Platforms:	Linux / Unix, Windows, Kubernetes, Docker
DevOps:	CI/CD (GitLab CI), Helm, SAST (SonarQube, GitLab SAST)
Security:	OAuth, OIDC, RBAC, HashiCorp Vault, CyberArk, TLS/HTTPS
SDLC:	Agile/Scrum, Jira, Unit & Integration Testing (Jest, Go testing), Claude (Claude Code)

EXPERIENCE

Software Development Lead

Lys Intelligence Inc. (contracted by T-Mobile) | Jan 2026 - Present

- Technical team lead for two applications supporting T-Mobile's network planning and design operations.
- Took ownership of a group of 6 developers with a poorly defined process and shaped it into a structured, delivery-focused team, establishing task management, review standards, and Agile cadences, doubling throughput sprint-over-sprint.
- Implemented 2-week continuous delivery cadence for both applications to replace irregular release schedule, reducing deployment risk by limiting change scope per release and ensuring regular CVE patching of project dependencies.
- Stabilized failing production intake tool within two weeks of joining, diagnosing expired service account credentials with no documentation or tribal knowledge, and established secret lifetime tracking to prevent recurrence.
- Discovered and resolved a silent data pipeline failure caused by an unannounced database decommission, restoring 3 of 4 affected jobs within one week by engineering reusable connection interfaces to replacement data sources (SQL Server, Oracle, Databricks), with the 4th restored once a blocking team dependency was resolved.
- Integrated AI tooling into daily development workflows across requirements, coding, testing, and code review, including generating Jira tasks for bug triage and accelerating feature development through AI-assisted code generation, and drove adoption across the team.
- Designed and led a structured interview process, conducting panel interviews and making final hiring recommendations for 4 hires across two projects.

Full-Stack Software Developer

Lys Intelligence Inc. (contracted by T-Mobile) | Mar 2024 - Jan 2026

- Developer on a large application supporting T-Mobile's financial operations and vendor relationships.
- Built and maintained features from design through integration testing on a Node.js/Express REST API, React frontend, and SQL Server database stack.
- Designed and implemented an automated secret management system using HashiCorp Vault and Kubernetes, centralizing source of truth for 20+ secrets and strengthening maintainability for 8 services across 6 deployment environments.
- Engineered OIDC and OAuth PKCE authentication and authorization system for UI and API service layers, successfully mitigating unauthorized access by external threat actors.
- Designed and implemented a role-based access control (RBAC) protocol integrated with Microsoft Azure, empowering application administrators to enforce fine-grained permissions for 100+ clients.
- Built and maintained CI/CD pipelines with GitLab CI, integrating Jest-based unit testing and linting across front-end, back-end, and cronjob services to enforce code quality, prevent regressions, and reduce manual integration risk for a team of 20 developers.
- Designed relational schemas and wrote SQL Server queries to support user management and business logic across 5 services.
- Led transition from HTTP-based microservice interfaces to event-driven architecture using RabbitMQ, improving application stability, performance, and scalability.

PROJECTS

Kamagi Tattoo Booking

<https://kamagi.club/>

- A booking platform for an award-winning tattoo artist, continuously maintained and supported since June 2024.
- Over the lifetime of the site, generated \$155000 through custom tattoo appointments and saved \$800 in platform costs.
- Designed and built a React frontend and Go backend deployed on Google Cloud, with Gmail, Mailchimp, and reCAPTCHA integrations.

EDUCATION

Computer Systems Technology Diploma

British Columbia Institute of Technology | Sept 2021 - May 2023 | GPA: 3.72 / 4.0 (93% avg)

ADDITIONAL SKILLS

- French (Intermediate)
